

The rubber panels are specially designed primarily as wall or floor bullet absorption lining also for other structural elements of indoor and outdoor shooting ranges.

The panels absorb bullets and their reflected fragments without major damage of the product surface. In addition, they significantly reduce the noise level during shooting thus contributing to the required safety of shooters. The panels have anti-fire properties and meet standard for hand fire weapons.

Standard colour for the panels with raster is black.
Upon client's request, raster may be coloured by adding EPDM granulate.

FLAT PANELS

Dimension:
1000 × 250 mm

Thickness:
30, 40, 50, 60 mm

ACOUSTIC PANELS with raster

Dimension:
500 × 500 mm

Thickness:
25, 30, 40, 50, 60 mm

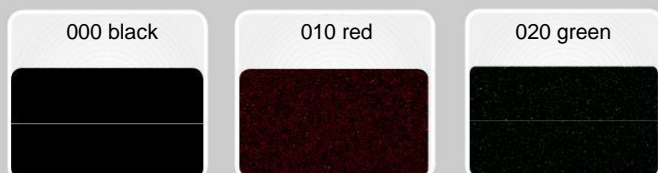

ACOUSTIC PANELS with raster EPDM

Dimension:
500 × 500 mm

Thickness:
25, 30, 40, 50, 60 mm
